BIGGER. BOLDER. BETTER.

THE GREAT PLAINS BD7600

Great Plains keeps raising the bar when it comes to seeding performance in a box drill. The legendary **BD7600** features an industry-leading box capacity, a durable, field-tested design, and the Great Plains Metering System for greater accuracy across all seed types, from traditional to cover crops. With optional hydraulic drive and DrillCommand®, producers can achieve superior versatility and variable-rate seeding from the cab and take advantage of cost-saving section control features. Now available in a new 50' model, the BD7600 rivals the productivity of an air drill with the simplicity of a box drill.

Check out the full line of BD7600 box drill models at www.GreatPlainsAg.com or visit your local Great Plains dealer.

Bringing next-level accuracy, convenience, and functionality to help you farm smarter.

Landoll | 5000 Series Grain Drills

**SEEDING
FLEXIBILITY**

PRECISE PLACEMENT FROM PRIMARY TO COVER CROPS

Many producers are making the switch to linear box affordability with the versatility to accurately plant high yielding primary crops as well as cover crops that produce valuable nitrogen and protect against soil erosion. Cover crops require the same seeding accuracy and depth control as primary crops. Achieving this requires the accuracy of the exclusive Fluted Seed Meter and the industry's first Pneumatic Down Pressure opener system. From 10' through 50' widths, the ruggedly built Landoll 5000 Series Drills deliver linear box affordability with unmatched standability.

Cover crops sequester carbons from the atmosphere and place them in your soils as valuable nutrients for your primary crop.

Call us for more information or visit us online at www.Landoll.com

5405 West Interstate 40, Amarillo, TX 79106

The Texas Wheat Producers Board (TWPB) and Association continue to work diligently to make resources readily available for wheat producers. Texas Wheat has worked to strengthen the stability of wheat markets, promote and fund essential wheat research, build customer loyalty and support programs to enhance producer profitability. The board oversees and allocates the expenditures of the two-cent-per-bushel statewide wheat checkoff for use in research, market development and education. The association is the legislative arm of the organization, providing a single united voice for Texas wheat producers in Austin and Washington, D.C.

RESEARCH: Funding research is an integral part of the board's mission. During the 2022-2023 fiscal year, the TWPB will support a number of research initiatives, allocating \$254,500 for researchers to address a variety of issues concerning Texas Wheat. Some of the research projects supported by the TWPB include the wheat breeding program and the statewide Uniform Variety Trials found in this publication.

MARKET DEVELOPMENT: The board remains committed to ensuring the competitiveness of Texas wheat domestically and internationally. Partnerships with U.S. Wheat Associates (USW) and Plains Grains, Inc. help carry out the mission to increase demand for Texas-grown wheat. In 2022, USW resumed face-to-face meetings with overseas customers. The TWPB looks forward to hosting a trade team in the future.

EDUCATION: In addition to developing educational programs for youth, consumers and producers, the TWPB participates in several national programs to increase awareness and consumption of wheat products. These programs include the Home Baking Association (HBA), which focuses on giving family and consumer sciences teachers and extension educators the tools and knowledge to promote the practice of home baking while incorporating wheat-based products. The TWPB also partners with the Wheat Foods Council (WFC) to distribute scientific and nutritional information to health professionals, dietitians, personal trainers, educators, media personnel and consumers.

LEGISLATION: Throughout the year, the Texas Wheat Producers Association staff and leaders engaged elected officials in Austin and Washington, D.C. on several issues, including disaster assistance, climate policy, tax exemptions and the Farm Bill. The association's commitment to creating a unified voice in government for Texas wheat producers has never been stronger.

The TWPA is a voluntary membership organization funded solely by membership dues. This grassroots organization is directed by an executive committee of Texas producers who represent areas spanning the entire state.

Amy Braley

The Uniform Wheat Variety Trial (UWVT), presented in the following pages, is coordinated and implemented by numerous Texas A&M AgriLife Research and Extension faculty and staff. We appreciate the cooperation from numerous Texas A&M AgriLife County Extension Agents, producers, universities, and private industry groups that contribute time, property, chemicals, and seed to conduct these field trials. Wheat market classes within these yield trials include Hard Red Winter Wheat (HRWW), Soft Red Winter Wheat (SRWW) and Hard Red Spring Wheat (HRSW).

During the 2021-22 wheat production season, Texas producers planted 5.4 million acres of wheat (down 2% from 2020-2021), harvested 1.3 million acres for grain (down 35% from 2020-2021), with an average yield of 28 bushels per acre (down 25% from 2020-2021) (National Agricultural Statistics Service, NASS).

The purpose of this publication is to provide unbiased yield data and disease and insect ratings for wheat producers across the state. Using this information, Texas wheat producers can make an educated decision concerning the most appropriate varieties for their geographic region.

Variety Selection: Selection of small grain varieties is one of the most important decisions a producer will make. This decision impacts potential yield (forage and grain), seed quality (test weight and protein), disease and insect management and maturity. It is important that producers diversify the varieties planted on their farms. Variety diversification spreads the risk associated with potentially devastating pests (leaf rust, stripe rust, Hessian fly, Wheat streak mosaic virus, wheat curl mite, greenbugs, etc.) and yield loss from adverse environmental factors (freeze, drought, etc.).

Producers are advised to select no fewer than 2 or 3 varieties to plant on their farms and preferably more, depending upon the size and location of fields. Variety selection should be based upon a combination of sound data from university trials and other reliable sources. Wheat varieties should be chosen based on multiple years of data (yield, pest resistance, grain quality and maturity). High yield over multiple years and multiple locations demonstrates a variety's ability to perform well over diverse environmental conditions. Stable yield performance is an excellent variety selection tool. It is important to consider decreasing yields over a 2 or 3-year time frame, which may reflect a change in disease and/or insect resistance.

When selecting a variety for the 2022-23 season, producers need to

consider multiple year averages, recognizing the unusual climatic conditions that impacted yield and quality over the past several years. It is strongly encouraged that producers look at the 3 and 4-year averages where available, and to look at numerous relevant variety trial locations. There are typically 20+ wheat variety trials conducted across the state each year, and most of these contain analyses for multiple years.

Interpreting the Data: Yield and test weight at each location have been analyzed using appropriate statistical procedures. The statistical analysis provides the mean, CV, and LSD values. It is important to note these statistical values to prevent misinterpretation of any replicated data.

The mean is another term for the average. Therefore, a mean yield is the average of all plots within a trial. Individual variety yields can be compared to the mean yield to determine how these varieties performed within the trial (i.e. were they above or below average?). This average can also be used as an indication of the environment for that location. A low mean yield can indicate poor growing conditions were experienced in that season; likewise, a high yield average can indicate favorable growing conditions.

The CV (Coefficient of Variation) value, expressed as a percentage, indicates the level of unexplained variability present within the trial. A high CV value indicates a lot of variability existed within the trial not related to normal variations that might be expected between the varieties in the test. This variability may be the result of non-uniform stands, non-uniform insect or disease pressure, variability in harvesting, or other issues. CV values in excess of 15% signify that there were problems in the trial, leading the reader to question the validity of the data as a true representation of varietal performance.

The LSD (Least Significant Difference) value is a numeric range to help the reader determine if the varieties performed differently from one another within the trial. If the LSD value is 5 bu/ac in a trial in which Variety A yielded 36 bu/a and Variety B yielded 30 bu/a, then Variety A is said to be significantly better. In that same trial with an LSD value of 5 bu/ac at a 0.05 (5%) significance level, the statistical inference one could say is that Variety A would yield better than Variety B in 19 out of 20 trials conducted in which there was at least a 5-bushel difference in yield. In this hypothetical comparison, you might have a 20th trial with a 5 bu/ac difference that there is not truly a statistical difference between Variety A and B, but random chance caused the 5-bushel difference.

2022 REGIONAL OVERVIEW

Texas High Plains: Variable rainfall and expanding drought conditions in fall 2021 resulted in poor planting conditions across the Texas High Plains. Timely planted fields benefited from early October 2021 rainfall, but warm windy conditions quickly dried out fields. Fields dusted in later (late-October-November) had poor stands. There was minimal winter precipitation through the Texas High Plains resulting in another dry winter. The few, dry snowfall events provided little moisture, and as a result, much of the region received less than one inch of moisture from October through mid-April. Like the winters of 2020 and 2021, prolonged winter drought conditions resulted in many producers pulling cattle off dryland wheat pasture early due to a lack of forage.

Texas Rolling Plains: The wheat season was brutal to wheat growers in the Texas Rolling Plains. Fall precipitation was extremely limited, and negligible or no rainfall occurred after October. Much of the November- and December-planted wheat in the area had extremely poor and inconsistent emergence or did not emerge at all until February. Spring conditions were considerably warmer and drier than normal, further reducing yield potential. Forage production was drastically reduced or completely lost in the small grain pastures, while many dryland wheat fields were abandoned due to the severe drought condition. Virtually all dryland wheat failed out that was planted behind cotton. Increased incidents of spider mites were reported as the spider mites thrive in the hot and dry weather. There were reports of white heads in wheat, which resembled freeze injury. However, it was likely caused by the drought stress rather than the freeze injury. Based on the conversations had with wheat producers in the Texas Rolling Plains, 2021/2022 wheat season was equal to or worth than the 2011 drought.

Texas Blacklands: Variable conditions characterized the start of the growing season in the region. Adequate planting conditions were observed, with warmer than normal temperatures into January. The unprecedented freezing temperatures observed in early 2022 delayed crop growth. Drought and Hessian Fly pressure limited yield potential. Harvest was delayed slightly due to wet weather.

South Texas: The 2021/2022 season started with above average temperatures for most of the region. The freezing temperature conditions observed in early 2022 affected the normal growth of wheat. Intensive drought and Hessian Fly pressure affected the crop in the region with a significant impact on yield performance.

Texas Locations Agronomic Data

South Texas: 2022

Location ¹	Cooperator(s)	Yield limiting issues	Planting date	Fertilizer (Total lb N/ac)	Water*	Pesticide applied (date)
Castroville	Rolling Mangold	ABANDONED. Planting errors	11/16/2021	50	IL	N/A
College Station	Texas A&M University Research Farm	DATA NOT SHOWN. Early freeze and drought	10/29/2021	90	D	Metribuzin (12/8/2021)
Uvalde	Texas A&M AgriLife Research and Extension Center	ABANDONED	11/15/2021	0	IL	N/A

¹All locations were conventionally tilled and planted on 7-inch row spacing. Standard seeding rate was 750,000 seed per acre for winter wheat.

*Irrigation: IL = Irrigated Limited, D = Dryland

³ Information obtained from the 2019 Spring Seed Directory.

⁴ This variety is protected by the **United States Plant Variety Protection Act**. Must have consent of owner for propagation.

² This variety is protected by **Title V of the Federal Seed Act, Unauthorized Propagation Prohibited**.

¹ Protected Variety - To Be Sold By Variety Name Only as a Class of Certified Seed - U.S.

³ This variety will be grown under the **Single Seed Use Agreement**.

⁴ This variety is **Patent Protected**.

¹ HRWW = Hard Red Winter Wheat, SRWW = Soft Red Winter Wheat, HRSW = Hard Red Spring Wheat.

¹ C = Certified seed, R = Registered seed, F = Foundation seed

Acknowledgements

The authors of this publication would like to thank the following companies who participated in these trials as well as the Texas Wheat Producers Board for their continuing support and funding for this research.

Additionally, the authors would like to thank the hard work and dedication of Texas A&M AgriLife employees Carla Naylor, Daniel Tyrer, Bronc Finch, numerous county extension agents, producer cooperators and others whose efforts helped make many of the locations across the state possible this year.

2022 TEXAS CERTIFIED SEED DIRECTORY

TEXAS DEPARTMENT OF AGRICULTURE COMMISSIONER SID MILLER
 P.O. Box 12847 • Austin, Texas • (512) 463-7476 • www.TexasAgriculture.gov
 For the hearing impaired: 1-800-735-2988 (voice) or 1-800-735-2989 (TDD/TT)

ABOUT THE DIRECTORY

The list of growers include those who have made application for inspection under the seed certification program. The majority of these growers have had several years of experience in the production of seed under the certification program.

In addition to field inspection, all Foundation, Registered, and Certified seed must also meet the requirement for other varieties and/or off types. Seed is not of the Foundation, Registered, or Certified class unless the official label is attached to the container. All Foundation, Registered, and Certified seed must be labeled in compliance with all provisions of the Texas Seed Law.

Orders for Foundation, Registered and Certified seed, therefore, can be accepted by the listed growers only with the understanding that they will be filled when the Foundation, Registered or Certified requirements are completed. Inquiries or orders should be sent directly to the growers or seed dealers.

IMPORTANT NOTICE

All Foundation seed is labeled with a label printed on white background, all Registered seed is labeled with a label printed on a purple background and all Certified seed is labeled with a label printed on a blue background. In addition to the information as to the variety and the name of the producer, all labels bear the imprint of the state seal of Texas. ONLY SUCH LABELS ARE OFFICIAL.

All Foundation, Registered and Certified seed must be packed in new even weight containers and each container shall be labeled in accordance with the TEXAS SEED LAW. The Registered class of small grains and rice and the certified class of any crop kind may be sold in bulk, provided the identity of the seed is carefully maintained, the seed is handled in a manner which prevents a mixture and a bulk certificate accompany the movement of seed.

**BLUE RIBBON TRITICALE**

Whether you're looking for a hay, silage or graze-out triticale variety or blend, we have an award-winning solution to your forage need. At 21.7, 21.8, & 22.7 tons per acre, ThunderTall™ & Thunder Tall II™ topped the NMSU irrigated dairy variety trials. For grazing, reputation cattlemen say ThunderGraze Extra™ has doubled their production. Our triticale won the Kansas State Fair! See us for ThunderCale™ and the complete Thunder™ brand of triticale and rye.
