## Farm and Ranch Equipment Displays for the Ag Community

Check out all three exhibit areas!

Domer Arena | Landon Arena | Exhibition Hall

# Welcome to the 34<sup>th</sup> annual Topeka Farm Show

The Tradexpos Team is proud to present the **34<sup>th</sup> annual Topeka Farm Show**. Each year we strive to bring you the best Agri-Business has to offer, and this year is no exception. Our exhibitors not only present the latest farm and ranch technology the industry has to offer, but also the area's largest variety of farm, ranch, and livestock equipment.

- ◆ Be sure to visit all three buildings: **Domer Arena, Landon Arena** and newly expanded **Exhibition Hall**
- ◆ Horse Clinician, **Scott Daily**, will give six **Horse Training Clinics in Domer Arena**  
*There will be two clinics each day. See our website for clinic times ~ [www.tradexpos.com](http://www.tradexpos.com)*
- ◆ Attend the **2023 Kansas Soybean Expo** - Wednesday, January 11th at 8:30 AM
- ◆ Stop by the Midland® Genetics booth (#1216) located in Landon Arena, to register for **40 units of Midland® Genetics Soybean Seed** - *Approximate value \$2520*
- ◆ Mark your calendars for the **2024 Topeka Farm Show - January 9, 10, & 11, 2024**

**Thank you for supporting the Topeka Farm Show!**

*The following is a list of shows produced by Tradexpos, Inc.*

## **WICHITA FARM & RANCH SHOW**

Nov. 30, Dec. 1, 2, 2023

Dec. 5, 6, 7, 2024

Kansas Star Event Center  
Mulvane, Kansas

## **TOPEKA FARM SHOW**

January 9, 10, 11, 2024

January 7, 8, 9, 2025

Stormont Vail Events Center  
Topeka, Kansas

## **FORT WAYNE FARM SHOW**

January 17, 18, 19, 2023

January 16, 17, 18, 2024

# After a challenging year for us all, 'We are excited to be back!'

Got a worn out engine? What should you do?—Call Don's Diesel.

Warped heads. Blown gaskets. Rattling rods and leaking rings. It doesn't take much to turn an incredible hunk of an engine into a whining weakling, or even worse—a worthless wreck. Your first thought when engine problems occur is to rebuild. If you're rebuilding an engine by yourself, or with the help of a mechanic, be sure you fix everything that is wrong or could possibly go wrong, while you have it torn down. If you have the right tools, some mechanical ability, and the right parts, rebuilding an engine could be a cinch. Don's Diesel helps with the right parts. Don's Diesel was created to specialize in diesel engine kits for agricultural use.

The family-operated business, since 1988, is located in Lawrence, Kansas. Willie, Rod's oldest son, stepped in to take over for his father eight years ago. He has 25 years experience as a GM master mechanic, now combined with eight years of the heavy duty business, has him more than qualified to help customers with anything they

need. Don's Diesel only sells the finest quality brand name products, including Mahle Clevite, Federal Mogul/FP Diesel, Reliance, Maxiforce, Interstate McBee and PAI Industries, Fel Pro and Victor gaskets. Those are trusted names to help keep new equipment operating efficiently and keep older equipment running better and longer.

Don's Diesel's expanded line of parts filling the needs for the industrial and truck industry that is growing. Along with the latest high quality replacement parts for Caterpillar, Cummins, Detroit Diesel and Navistar truck engines the business has added new aftermarket parts for Mack, Mercedes, Duramax, Duetz, Kubota and Yanmar engines. Don's Diesel also has a more complete inventory of electronic engine kits with articulated pistons. Mahle Clevite now offers the Detroit (14L) 60 series EGR 1-piece Monotherm pistons.

The agricultural market is ever-changing and Don's Diesel is adding

new lines every year. At the same time, Don's Diesel is committed to keeping a good inventory of parts for a custom-

er's older and reliable equipment. For more information, call 800-345-6513 or visit [www.donsdiesel.com](http://www.donsdiesel.com). ♦

## Ag Spray Equipment Unveils New PX Boom and ProUTV Sprayer

Newton, Kan. – Ag Spray Equipment's Newton, Kan. location continues to expand its agricultural sprayer offerings with the PX Boom and ProUTV Sprayer. Both units will be on display at upcoming trade shows in the region. The PX Boom from Ag Spray Equipment is an exciting addition to our sprayer accessory lineup. As one of the most universal products offered, the PX Boom can be used in a variety of applications due to its com-

pact size and versatility.

"This is a style of boom a lot of our customers have been asking about for a long time," said Ryan Williams, location manager of the Ag Spray Equipment location in Newton.

Available with manual, electric, or hydraulic fold options, the PX Boom can be used in several different environments such as turf settings, pastures, and ditches. The PX Boom features a variety of configurations and

can be mounted on UTV's, trailers, and small tractors. Plans are to have the booms available for purchase on Ag Spray's new ProUTV sprayer. The new ProUTV unit is available with 65 gallon and 105 gallon tanks as well as electric and manual controls.

Ag Spray Equipment is an industry

leader in liquid application and fluid handling equipment manufacturing a broad range of sprayers, liquid fertilizer applicators, nurse tenders and storage trailers. Founded in 1966 and still family owned, today's Ag Spray Equipment features nine locations strategically placed across the United States. ♦

## Use calving pasture rotation to prevent disease spread

By Lisa Moser

*Kansas State University Research and Extension*

The old saying that "an ounce of prevention is worth a pound of cure" is one that commonly refers to the importance of reducing the risk for disease spread.

And in the case of beef cattle scours, where cows calve has a lot to do with how well the newborns can stay healthy in the first few weeks of life, say the experts at Kansas State University's Beef Cattle Institute.

Speaking on a Cattle Chat podcast, veterinary experts outlined how calf diarrhea, also known as scours, can be a serious issue in newborn calves but one that can be minimized by rotating the pastures where the cows calve. Scours can lead to dehydration and death in newborn calves, said Dr. Bob Larson, K-State veterinarian.

"A newborn calf's worst enemy from a germ standpoint is a calf that is a few weeks old because those older calves shed more germs that cause scours," Larson said.

To reduce the exposure between newborns and calves that are a few weeks old, Larson and the other experts recommend following the Sandhills Calving System that was developed through University of Nebraska research done years ago in the Sandhills.

"The Sandhills Calving System is one of the most impactful interventions that we have for calf scours," Larson said.

In this system, cows that are heavy in their pregnancy are moved to new pastures every 2-3 weeks, and once they calve, they stay in the same pastures where they gave birth until the calves

are old enough to be co-mingled with the others in the herd, according to veterinarian Dr. Brian Lubbers.

"This allows the calves to be born on the cleanest pastures, and then once a certain percentage of the herd has calved, those cows that are still pregnant move to a new pasture," Lubbers said.

Larson said the goal of each herd following this system would be to move the pregnant cows away from cows that have already calved at least three times from the start to the end of the calving season.

"After cows have been calving for two or three weeks, move the pregnant cows to a new pasture and do that again after the next two to three weeks of calving," Larson said.

Lubbers added that the bacteria and

viruses that cause scours are spread through fecal to oral transmission, so by having a fence between the calving groups, most of the risk for scours passing through the groups of calves is minimal.

Regarding the timing of bringing all the spring calves together in the same pasture with their dams, the veterinar-

ians agreed that when the youngest calves are six weeks of age the greatest risk from scours is passed and it is safe to bring the herd together again.

"Make sure the last pasture they go to as a group is not one that was used for calving earlier in the season so that they are all being moved to a clean pasture," Lubbers said.

## From the Rawhide family to yours

John McDonald knows a thing or two about livestock equipment after working with cattle and rodeo livestock most of his life. Years spent hauling a portable arena across America for televised bull riding events allowed him to put his experience and knowledge to the test when it came to portable corrals. His family will joke about not being able to throw away anything he had notes on, because that item could just hold the prototype idea or drawing for his next big design.

In 2002 John and his family relocated to Abilene, Kansas to fulfill his

dream of designing a portable corral that would be easier than the other systems on the market. It could be set up by one person without any lifting and it could be done quickly; yet it could also be pulled down the road at highway speeds, ensuring that no time would be wasted while catching cattle. It was everything he wanted it to be.

With each purchase of a corral the customer receives a diagram of the unit, a bird-eye view so to speak, showing how the panels are configured. The most important part is that it shows how the panels fold up.

Many customers want to know about warranty work on a system like this and the McDonald family is only too happy to inform them of theirs. All welding work and assembly is done by their employees so anything that may happen to those welds or to the panels John and Mary will stand behind and call it their lifetime warranty.

Every panel on a Rawhide Portable Corral has a solid rubber wheel positioned in a specific location so that when folded up the panels will all fold flush against the others. This is espe-

cially important with the larger size systems as the racks holding the panels are only so big. This ensures that the system is road-width legal and is not considered oversized.

Rawhide Portable Corral, Inc is proud to have corrals in 43 states and three countries, which is a true showing of how these units work in a multitude of terrains.

For more information about Rawhide Portable Corral's and to view product videos visit [www.rawhide-portablecorral.com](http://www.rawhide-portablecorral.com) or find them on Facebook or call 785-263-3436. ♦

## Combine harvesters, 4WD tractors grow despite overall losses in November

Combine harvester sales remain positive, joined by 4WD units for both the U.S. and Canadian markets, while total tractors fell in both countries according to the latest data from the Association of Equipment Manufacturers.

Total U.S. ag equipment unit sales fell overall, though the largest units grew. U.S. total farm tractor sales fell 20.8% for the month of November compared to 2021, with the sub-40 horsepower segment leading losses at 27.9%. U.S. self-propelled combine sales for the month grew 8.3% to 314 units sold, one of only two segments positive for the year (up 15.7% YTD). The other segment growing YTD, 100-plus horsepower units, grew 6.2% for the month (now up 13.3% YTD). Total farm tractor sales are down 14.5% year-to-date.

In Canada, only two segments showed growth for a second month, both more than doubling: 4WD tractors, which are up 170.6%, and combine harvesters that are up 105.3%. Overall unit sales in tractors were down 11.1%. The sub-40 horsepower segment led losses in Canada as well, down 9.3%, followed by mid-range 40 to 100 horsepower units, down 4.4%. Unit sales in 2WD segments fell 12.4% overall, with only 100-plus horsepower units positive, up 1.5% for the month. Year-to-date farm tractor unit sales were down 6.9% in Canada, while harvesters remain positive for the year, now up 9.6%.

"While the total sales markets are down, the sale of larger ag-focused equipment continues to be strong," said Curt Blades, senior vice presi-

dent, industry sectors and product leadership at AEM. "The overall reduction in numbers is attributed to small tractor sales which were experiencing unprecedented growth

during the pandemic. However, with the efficiency and yield gains in new row-crop tractors and harvesters, it's easy to see why those segments continue to grow."
